Fresh IAM Engineer/ Integration Engineer

Role and Responsibility

- Why IAM (Identity and access management)? Businesses leaders and IT departments are under increased regulatory and organizational pressure to protect access to corporate resources. As a result, they can no longer rely on manual and error-prone processes to assign and track user privileges. IAM automates these tasks and enables granular access control and auditing of all corporate assets on premises and in the cloud.
- IAM Engineer is the new roles that exist in Vietnam market in recent year, where you will design, develop, test, implement, and integrate Identity and Access Management (IAM) systems and solutions. You ensure that solutions protect information resources against unauthorized use, inappropriate degrees of access, disclosure, damage and/or loss.
- As the job is new to the market, IAM engineer roles require training and flexibility and at Adnovum, we are willing to invest in you to teach and mentor you to become an expert in this new domain.
- You will work with our security experts for **3 months from mid Feb to mid May 2022** and then jump to real work of IAM Engineer.

In your daily work, you will learn how to:

- Implement of functional and non-functional requirements (availability, security, performance, etc.) of IAM solutions according to specification.
- Write documentations (requirement, design, test, guides, etc.)
- Design and provide estimation of technical solutions
- Develop Unit Test and SIT Test Cases
- Install and configure IAM/Security products
- Develop integration modules, extensions, or customizations for IAM/Security products
- Develop scripts and tools for data migration (data checking, cleansing, transformation, merging, loading, reconciliation)
- Collaborate with other Adnovum employees in international cross-functional teams to achieve goals

Qualifications and requirements:

- No experience is required for this role
- You want to work with world-class security standards
- You are final year student in technical university
- You want to have full time job at Adnovum after 3 months training with our expert

If you are passionate about security, sign up for the job.
